Anna Johnson

My name is Anna Johnson and I'm an aspiring industrial designer/ graphic designer. I've been passionate about art since I was seven and the guitar since I was ten. Art has always been a meaningful outlet for me to express myself and connect with others. Throughout my time at South Central High School I've improved in my skill and creative thinking abilities. I've been able to improve at digital art as well as traditional art.

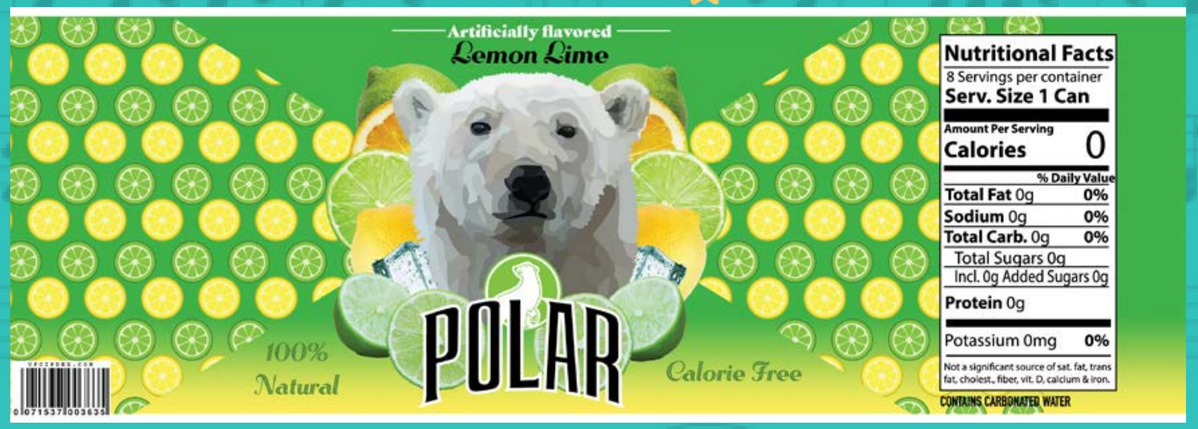
PLAYING CARDS

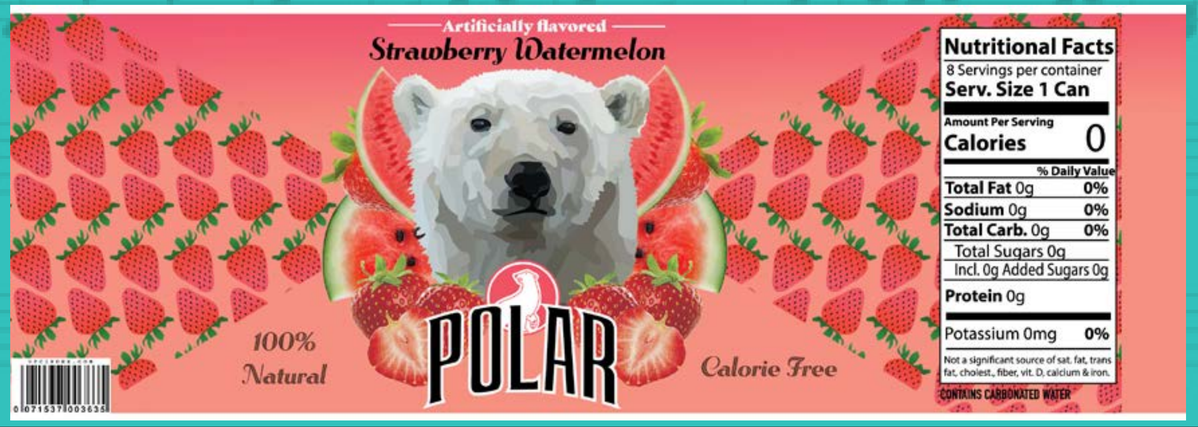
To create my playing cards I designed the facecards in Photoshop and the logo in Illustrator. I imported all ofmy designs into Indesign to create the cards. I was inspired by Animal Crossing New Horizons when making my cards.

WHO AM I ?

For my Who Am I project I included my aspirations for the future, my guitar, and my cat. I created illustrations using Adobe Illustrator and imported a logo I created by hand.

SODA CANS



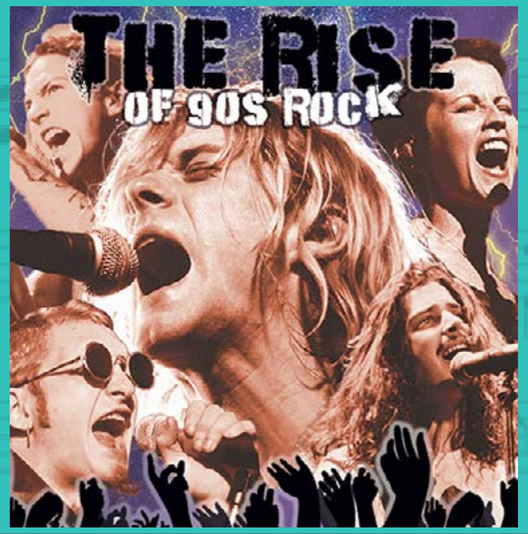


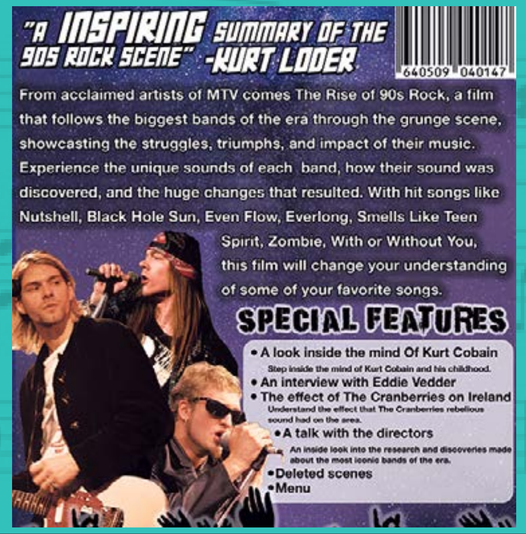
For my soda cans design I chose flavors with all different color schemes. I chose the brand Polar so that I could incorporate the polar bear in the logo. I created the bear illustration on Adobe Illustrator and the designs on Adobe Indesign.

CLOTHING CATALOG

In my clothing catalog I chose an orange/blue color scheme. I chose the name Nocturnal so that I could incorporate black cats into my design. I created the clothing designs using Adobe Photoshop, the cat illustrations using Adobe Illustrator, and the pages on Adobe Indesign. For the moon and star doodles I drew them out on Procreate before importing them to Indesign. I also incorporated some illustrations into my clothing designs.

DVD COVER

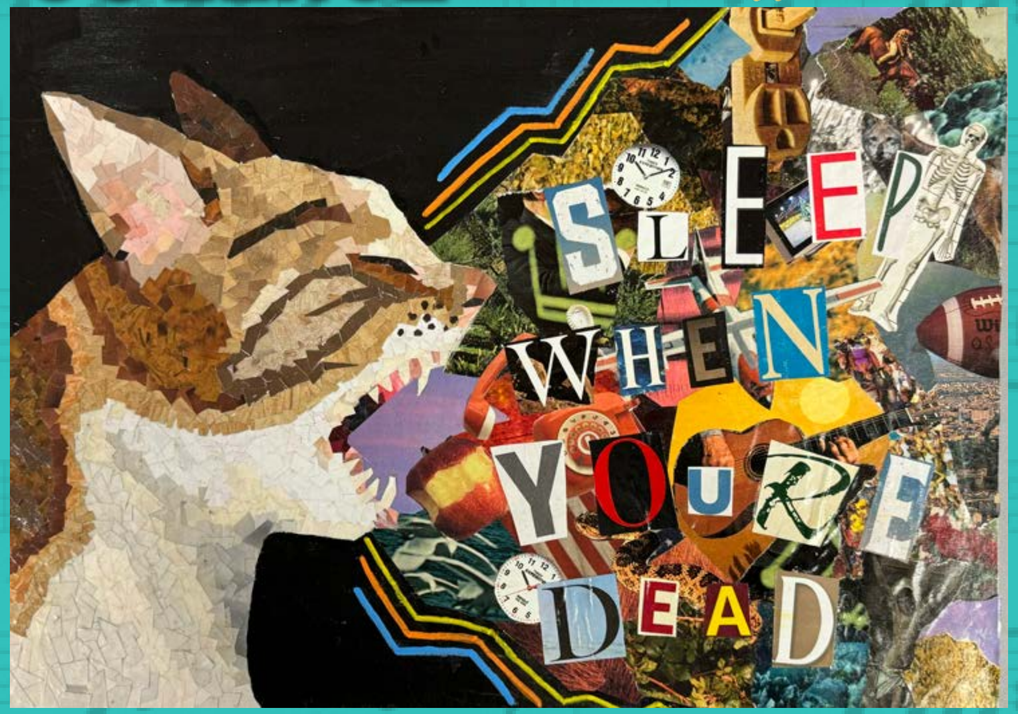




For my DVD cover I knew I wanted to incorporate some of my favorite artists, so I chose The Rise of 90s Rock. I chose a purple/red color scheme. I created this design in Adobe Photoshop.

Anna Johnson

CAT COLLAGE



To create my cat collage I cut out small bits of magazine to create the colors of the cat's fur. I chose the quote "Sleep When You're Dead" because it is something my grandma said. I wanted the collage to show all the things that you have the opportunity to do when you're alive. I won 3rd place for this project at the 2024 Pitt County High School Art Competition.

CAT COLOR WHEEL

I was inspired to create a cat color wheel by a color wheel I saw in my art teacher's room. I thought it would be interesting if the cat was the complimentary color of the background. This is the largest painting I've ever made.

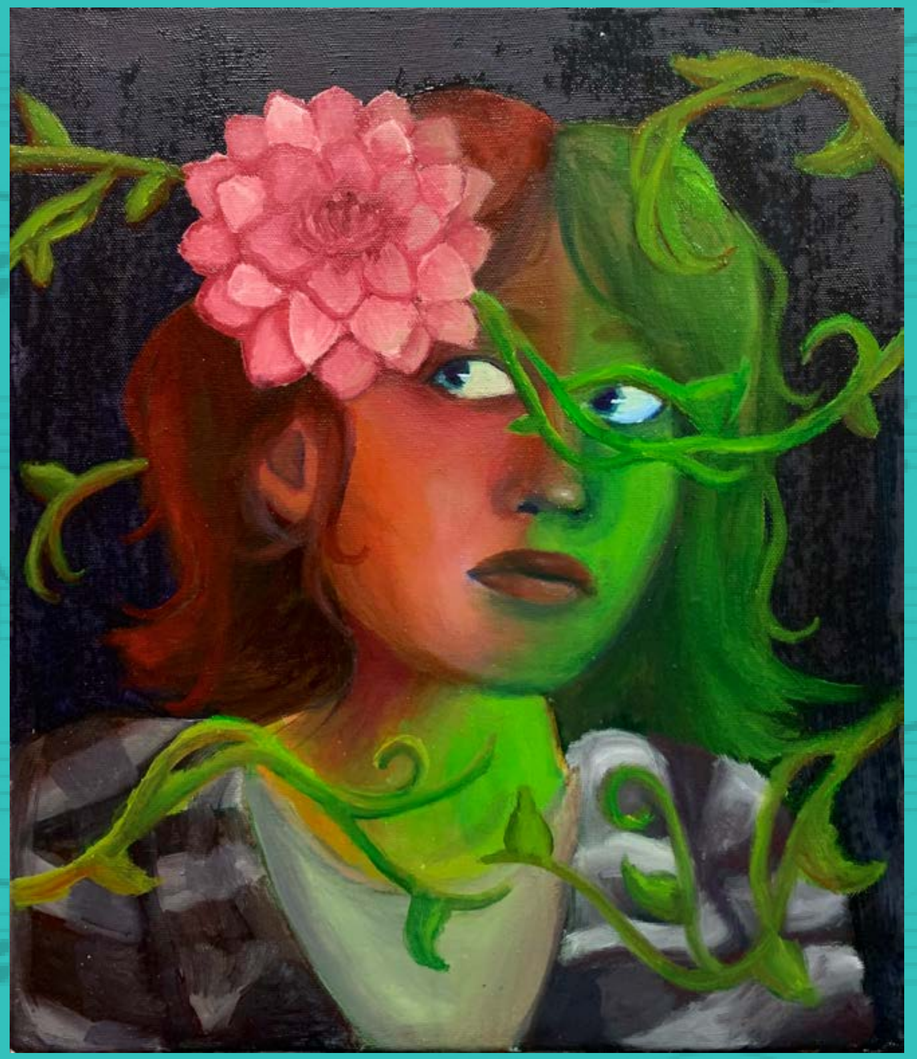
MITSKI

I used stippling to create this proect. I focused on the shadows in the face and the highlights. I incorporated some of Mitski's songs and lyrics into the space below her face. I won an Honorable mention for this piece at the 2022 Pitt County High School Art Competition.

CAT RACING

For this project I painted the car and cat close up traditionally. I imported the illustrations to Photoshop and used gradients and brushes to create the poster. This was the first time I combined traditional and digital art on Photoshop.

SELF PORTRAIT



To create my self portrait I took a picture of myself in an interesting light. I used oil paints to create this piece. I learned how to mix oil paints and how it is different from acrylic paint.

STARRY FELINE

When making this painting I started with a sketch and imported it to Procreate. I used the different Procreate brushes and layer settings to create my desired look. I used my own cat as a reference.

TRUCK

I based this project off of my grandpa's truck. I used cardboard a nd wood to create this piece. I incorporated LED lights by making a circuit that has a button in the bed of the truck. This was the first time I incorporated LEDs into a design.

TV ATARI

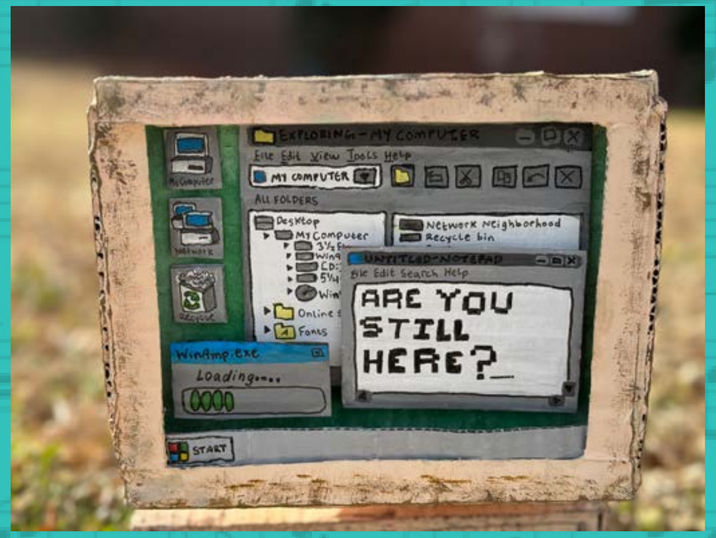
I was inspired to create this project when I heard my dad talking about his old gaming console. I used wood, clear plasic, and string to create this piece. I created a plastic bulb around the LED to disperse the light to illuminate the entire screen.

GUITAR

I based this project off of my grandpa's old electric guitar. I used wood, foam, and wire to create this piece. I laser cut the Fender logo into the top of the neck.

PERSONAL COMPUTER

I had the idea to create this project when I got a new computer. I used cardboard and string to create this piece. I layered the cardboard on the screen to create the overlapping windows. I used string to connect the keyboard and mouse to the computer.



HAUNTED HOUSE

I created this project when I had an interest in architecture. I used cardboard, paper, plastic straws, and cotton to create this piece. I made the layout on the Sims4 before I sketched it out. I created individual drawings to go into each window.

ORIGAMI TREE

I was inpired to make this project by the tree that I used to climb in my backyard. I thought it would be interesting if I i ncorporated fall colors on the the cranes/leaves. I used paper, wire, tissue paper, foam, and string for this project.
